

eSENSE Healthcare Dashboards

Visualize Your Data · Analyze Your Performance · Optimize Your Operations

Overview

Exploit the true potential of your healthcare data with instant dashboard access to critical information from multiple healthcare systems

1. Rapid deployment of healthcare dashboards based on Microsoft's SharePoint platform and NSE's eSENSE Visualizers;
2. Instant graphical insight into key healthcare metrics – all the data and metrics you need, all in one place;
3. Proactive analysis of critical healthcare data from multiple financial, clinical and supply chain systems;
4. Streamline management reporting, minimize the risks of regulatory noncompliance and optimize patient care.
5. Fast, secure data take-on from disparate data silos and custom dashboard creation for multiple roles.

eSENSE Healthcare Dashboards support all 2003 through 2010 versions of SharePoint and can be deployed in-house or as an online hosted service.

Healthcare providers are increasingly challenged to deliver high-quality patient care within tighter financial constraints and increasing regulatory requirements. This means managing large pools of data from multiple financial and clinical systems to support rapid analysis and enhanced decision-making. Based on Microsoft's SharePoint collaboration platform, NSE's eSENSE Healthcare Dashboards empower healthcare professionals to easily organize information and provide instant insight into the key metrics that optimize clinical, regulatory and financial performance.

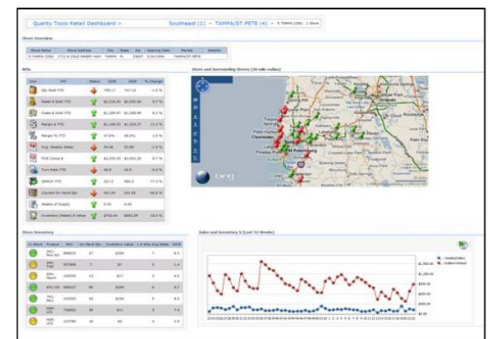

1. Instant visibility into key healthcare metrics

eSENSE Healthcare Dashboards provide timely, accurate visibility into the scattered silos of healthcare data such as clinical, financial, utilization and patient care systems. This graphical visualization of critical data gives decision-makers secure, instant access to information relevant to their roles. By easily organizing and integrating information in an intuitive dashboard format, users can monitor and analyze key metrics across a variety of healthcare applications.

2. Proactive analysis of healthcare information

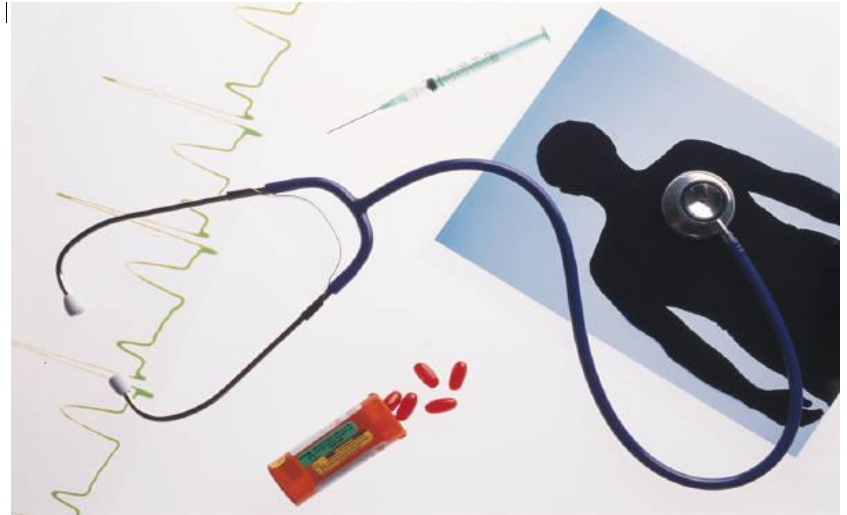

Given the increasing complexity of healthcare management, the challenge is not only to manage and organize information from multiple systems but also to provide the tools that support rapid analysis and more informed decision-making. This includes, for example, the ability to navigate and drill down into more detailed dashboards, provide support for rich analytics and standard KPIs and the capability to detect trends that impact operational efficiencies.

eSENSE Healthcare Dashboards

eSENSE™

Leverage Existing Systems

eSENSE Dashboards are designed to harness the existing data which healthcare providers have already invested in including clinical transactional systems and financial systems. By integrating data from disparate silos, users access all the information they need in one place.

Standard SharePoint Platform

eSENSE Dashboards exploit the power and flexibility of Microsoft's SharePoint collaboration technologies; a platform widely used by healthcare providers. Adding eSENSE to this platform provides the capability to rapidly build custom dashboards leveraging existing system data.

Fast Dashboard Deployment

eSENSE Dashboards are designed for fast deployments and do not require custom coding or IT expertise. Great looking dashboards are created using an intuitive 5-step process to access, select and configure healthcare information from multiple sources within a SharePoint site.

Privacy and Security

Privacy and security are paramount when accessing healthcare information. eSENSE Dashboards enable control of individual data entities using the SharePoint security model. Any data or entity can be restricted based on the SharePoint role of the individual user or group.

Take the Next Step

To learn more about eSENSE Healthcare Dashboards, please visit us online at www.nse.com, email marketing@nse.com, or call +1 770.416.6500.

NSE is a Microsoft Gold Certified and managed partner providing value-add solutions based on the SharePoint platform. NSE's eSENSE solutions enable the rapid creation of great looking business dashboards leveraging data from multiple systems.

All eSENSE products are designed for fast deployment to SharePoint users of all sizes including hosted services for our vertical solutions.
